Overview

DEFINITION

Based on daily, global climate sea surface temperature (SST) analyses generated by the Copernicus Climate Change Service (C3S) (product SST-GLO-SST-L4-REP-OBSERVATIONS-010-024).

Analysis of the data was based on the approach described in Mulet et al. (2018) and is described and discussed in Good et al. (2020). The processing steps applied were:

1. The daily analyses were averaged to create monthly means.
2. A climatology was calculated by averaging the monthly means over the period 1991 - 2020.
3. Monthly anomalies were calculated by differencing the monthly means and the climatology.
4. An area averaged time series was calculated by averaging the monthly fields over the globe, with each grid cell weighted according to its area. ...

Global Average SST Anomalies

Monthly and global average SST anomalies relative to the 1991 – 2020 average (light green line and crosses), a filtered version of the monthly time series (dark green) and the linear trend in the filtered time series and its 95% confidence interval. Calculated from the C3S global SST analyses (available in product SST-GLO-SST-L4-REP-OBSERVATIONS-010-024).

Classification

Full name	Global Ocean Sea Surface Temperature time series and trend from Observations Reprocessing
Product ID	GLOBAL_OMI_TEMPSAL_sst_area_averaged_anomalies
Source	Satellite observations
Spatial extent	Global Ocean · Lat -90° to 90° · Lon -180° to 180°

Temporal extent	Since 1 Jan 1982
Temporal resolution	Monthly
Variables	Sst anomaly · Sst anomaly filtered
Indicator family	Sea water temperature
Feature type	Point series
Blue markets	Science & Innovation
Update frequency	Annually
Format	NetCDF-4
Originating centre	Met Office (UK)
Last metadata update	25 November 2025

Copernicus

The [Copernicus Programme](#) is the European Union's Earth Observation Programme, looking at our planet and its environment for the ultimate benefit of all European and global citizens.

Copernicus Marine Service

Provides free, open, regular and systematic reference information on the blue (physical), white (sea ice), and green (biogeochemical) ocean state, variability and dynamics across the global ocean and European regional seas.
