Overview

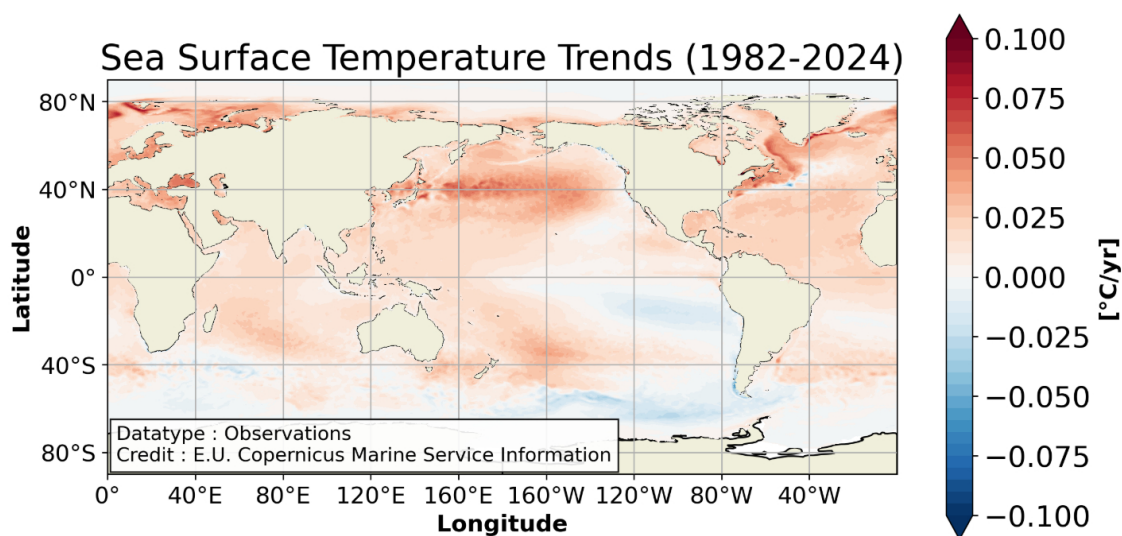

DEFINITION

Based on daily, global climate sea surface temperature (SST) analyses generated by the Copernicus Climate Change Service (C3S) (product SST-GLO-SST-L4-REP-OBSERVATIONS-010-024).

Analysis of the data was based on the approach described in Mulet et al. (2018) and is described and discussed in Good et al. (2020). The processing steps applied were:

1. The daily analyses were averaged to create monthly means.
2. A climatology was calculated by averaging the monthly means over the period 1991 - 2020.
3. Monthly anomalies were calculated by differencing the monthly means and the climatology.
4. The time series for each grid cell was passed through the X11 seasonal adjustment procedure, which decomposes a time series into a residual seasonal component, a trend component and errors (e.g., Pezzulli et al., 2005). ...

[Read more](#)

Global map of linear trends from monthly, filtered time series of SST between 1982 and 2024. Calculated from the C3S global SST analyses (available from the Copernicus Marine Service in product SST-GLO-SST-L4-REP-OBSERVATIONS-010-024).

Classification

Full name	Global Ocean Sea Surface Temperature trend map from Observations Reprocessing
Product ID	GLOBAL_OMI_TEMPSAL_sst_trend
Source	Satellite observations
Spatial extent	Global Ocean · Lat -89.97° to 89.98° · Lon -179.98° to 179.98°
Spatial resolution	0.05° × 0.05°
Temporal extent	Since 1 Jan 1982
Variables	Sst trends
Indicator family	Sea water temperature
Feature type	Grid
Blue markets	Science & Innovation
Update frequency	Annually

Copernicus

The [Copernicus Programme](#) is the European Union's Earth Observation Programme, looking at our planet and its environment for the ultimate benefit of all European and global citizens.

Copernicus Marine Service

Provides free, open, regular and systematic reference information on the blue (physical), white (sea ice), and green (biogeochemical) ocean state, variability and dynamics across the global ocean and European regional seas.
